

AT VISION

WISEUR VIDEO V4008

The video-viewfinder V4008 is mounted on the eyepiece of the Beaulieu 4008 and allows you to frame a scene without having an eye glued to the viewfinder.

Especially useful for making shots at the ground or at the end of a pole with a precise framing.

It restores the full context of the referred virtually borderless black on the image against.

Very easy to assemble it can be powered by a block or a 12V battery power supply and plugs into any monitor PAL
